SCIENCE

Instructions:

- **Do all the holiday homework questions in the activity file.**
- **Complete your science Q/A and worksheets and learn it.**

Q1. Read the passage and answer the given questions.

The teacher kept some water in a beaker and told the students to observe what happens. The students observed that tiny bubbles appeared before the water started to boil.

Teacher boiled the water for about five minutes and then filled the hot water in a bottle up to the brim. She put the cap on the bottle to make it air tight. Then she cooled the bottle to room temperature

- (a) Why did the tiny bubbles appear in water?
- (b) Do you think tiny bubbles will appear on heating the water taken out from the bottle? Explain.
- (c) What will happen if soil is added to this water?

Q2. Activity: Floating the paper clip experiment. Attach a magnet to a metal bracket mounted on a shelf or box. Now, tie a piece of string to a paper clip and place in underneath the magnet. Observe how the magnet causes the paper clip to rise up and float at the end of the string. You can test the strength of the magnetic attraction by pulling on the string to see how far away from the magnet the paper clip will float.

Q3. Prepare a working model based on the science syllabus.
